End-to-End Analytics Workflow

From raw operational data to actionable business intelligence

This project transforms raw Zepto transactional data into a fully interactive Power BI analytics suite — covering Sales, Customers, Products, Orders & Deliveries — enabling data-driven decisions at every level of the organisation.

What We Set Out to Achieve

Sales Performance Analysis

Track revenue trends, growth periods, and category-level sales performance across all markets.

Customer Behaviour Insights

Segment customers, analyse spending patterns, measure LTV and identify high-value cohorts.

Delivery Performance Monitoring

Evaluate delivery times, on-time rates, distance correlations and route bottlenecks.

Product Trend Evaluation

Identify top products by revenue & ratings, analyse category performance over time.

Actionable Business Insights

Convert data into strategic recommendations that drive measurable operational improvements.

Business Challenges

Key pain points demanding a centralised analytics solution

10M+
Daily transactions

6
Siloed data tables

48 hrs
Avg report delay

01

Massive Operational Datasets

Millions of rows across orders, deliveries and transactions make manual analysis impossible at scale.

02

No Centralised Reporting

Metrics scattered across spreadsheets with no single source of truth for leadership decisions.

03

Hidden Delivery Inefficiencies

33,947 late deliveries invisible without real-time monitoring — representing 73% of all deliveries.

04

Decision-Making Without Data

Without BI, teams rely on intuition over evidence — missing revenue and retention opportunities.

6 Core Data Tables

Zepto's relational data ecosystem powering the 360° analytics suite

Customers

~50K records

customer_id · name · city · segment · join_date

Orders

~500K records

order_id · customer_id · date · status · total

Products

~10K records

product_id · name · category · price · stock

Transactions

~500K records

txn_id · order_id · amount · payment_method

Delivery

~500K records

delivery_id · order_id · time_mins · distance · status

Ratings

~200K records

rating_id · product_id · customer_id · score · date

Building a Clean, Reliable Data Foundation

zepto_analytics.sql

```
-- 1. Handle NULL values
UPDATE orders
SET delivery_time = 0
WHERE delivery_time IS NULL;

-- 2. Remove duplicate records
DELETE FROM transactions
WHERE txn_id NOT IN (
    SELECT MIN(txn_id)
    FROM transactions
    GROUP BY order_id, amount);

-- 3. Standardise city names
UPDATE customers
SET city = TRIM(UPPER(city));

-- 4. Create SQL View
CREATE VIEW v_sales_summary AS
SELECT c.city, SUM(t.amount)
FROM orders o JOIN customers c
ON o.customer_id = c.id;
```

Null Value Handling

Replaced NULL delivery times, amounts and customer fields with appropriate defaults.

Duplicate Removal

Eliminated duplicate transactions using GROUP BY deduplication logic.

Data Standardisation

Normalised city names, payment types and product categories to consistent formats.

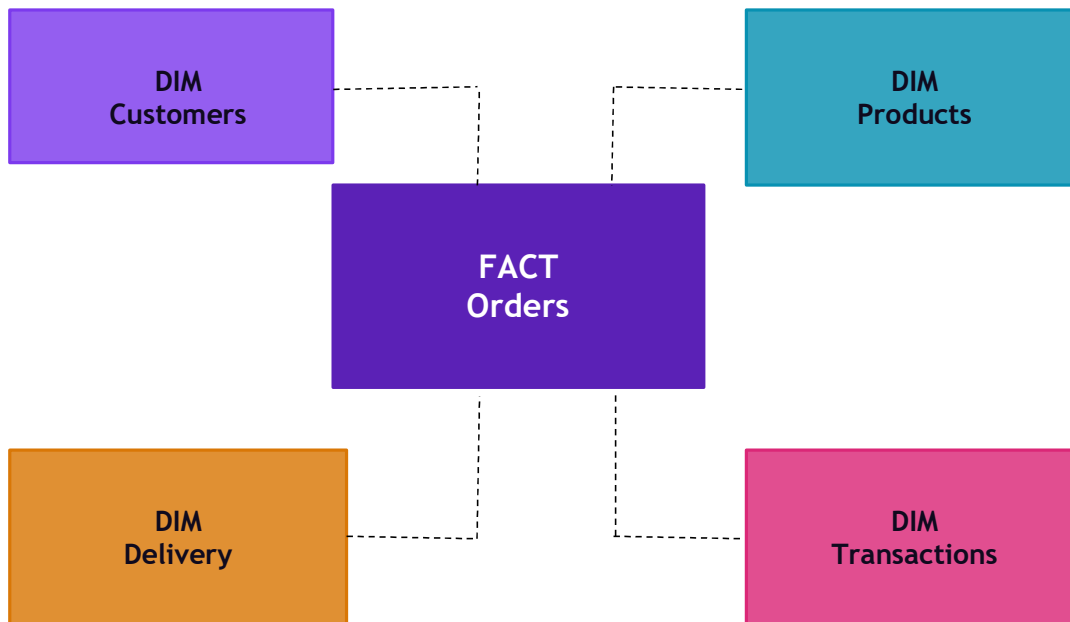

SQL Views Creation

Built v_sales_summary, v_customer_analytics, v_delivery_performance views.

Star Schema & DAX Measures

Data Model — Star Schema

1-to-many relationships · Star schema optimised for Power BI

DAX Measures

Total Revenue

```
= SUMX(Orders, Orders[amount])
```

Avg Delivery Time

```
= AVERAGE(Delivery[time_mins])
```

Customer LTV

```
= DIVIDE([Revenue],[Customers])
```

Order Count

```
= COUNTROWS(Orders)
```

On-Time Rate

```
= DIVIDE([OnTime],[Deliveries])
```

Tracking Customer Activity, Spending & Ratings

11,200

Total Customers

70,573

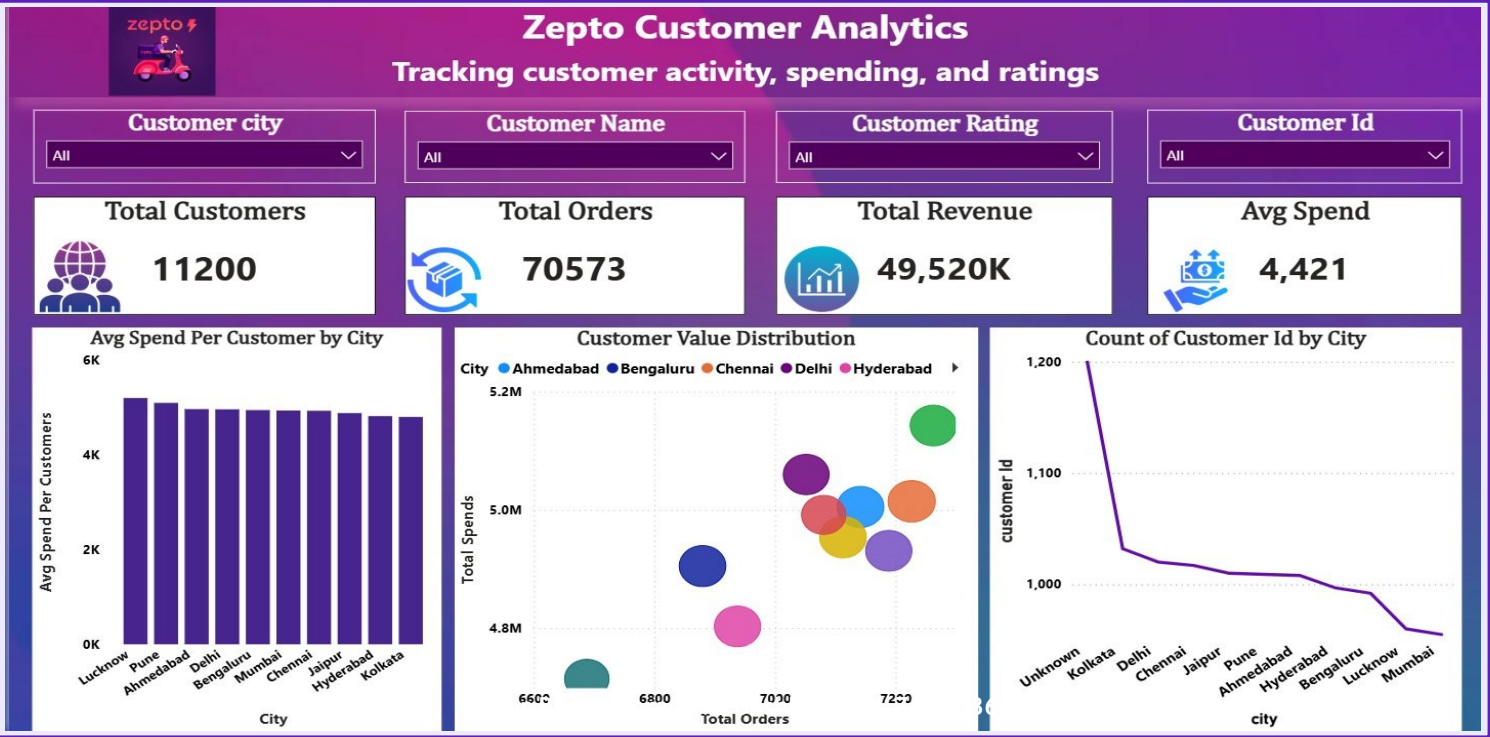

Total Orders

₹49,520K

Total Revenue

₹4,421

Avg Spend

Key Highlights

- Avg spend per customer consistent across 10 cities (~₹4,400–₹5,000)
- Hyderabad leads bubble chart — highest total spend + order volume
- Kolkata highest customer count; Mumbai & Bengaluru lowest
- Filters: Customer City · Name · Rating · Customer ID

Tracking Sales Performance, Order Volume & Growth Trends Over Time

₹3.6 Cr

Total Sales

18,372

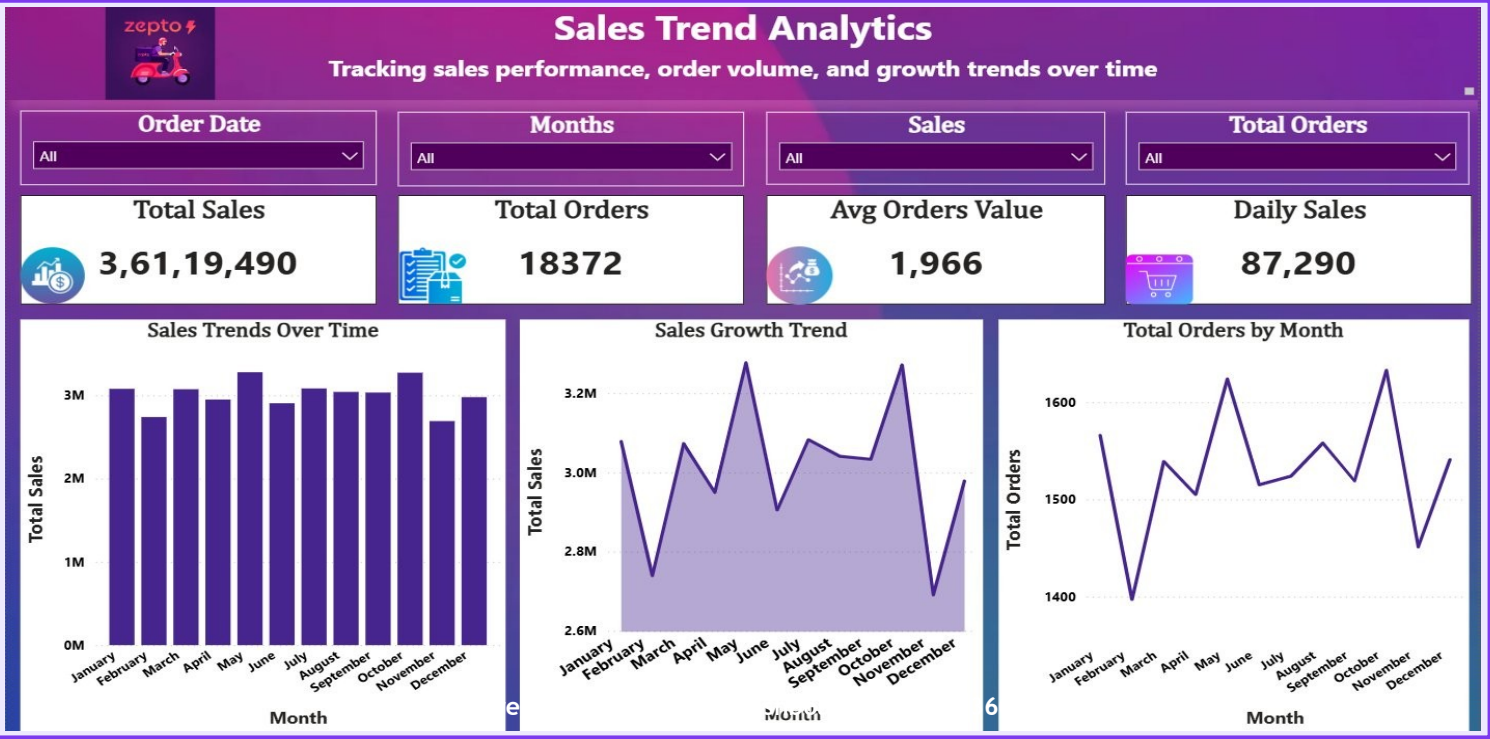

Total Orders

₹1,966

Avg Order Value

₹87,290

Daily Sales

Key Highlights

- Monthly sales stable at ₹2.5M–₹3.3M with peaks in June & October
- Sales growth trend shows strong recovery after September dip
- Total orders by month range 1,400–1,600 with seasonal variation
- Filters: Order Date · Month · Sales Range · Total Orders

Monitoring Delivery Efficiency, Speed & Service Quality Across Orders

42 min

Avg Delivery Time

5 km

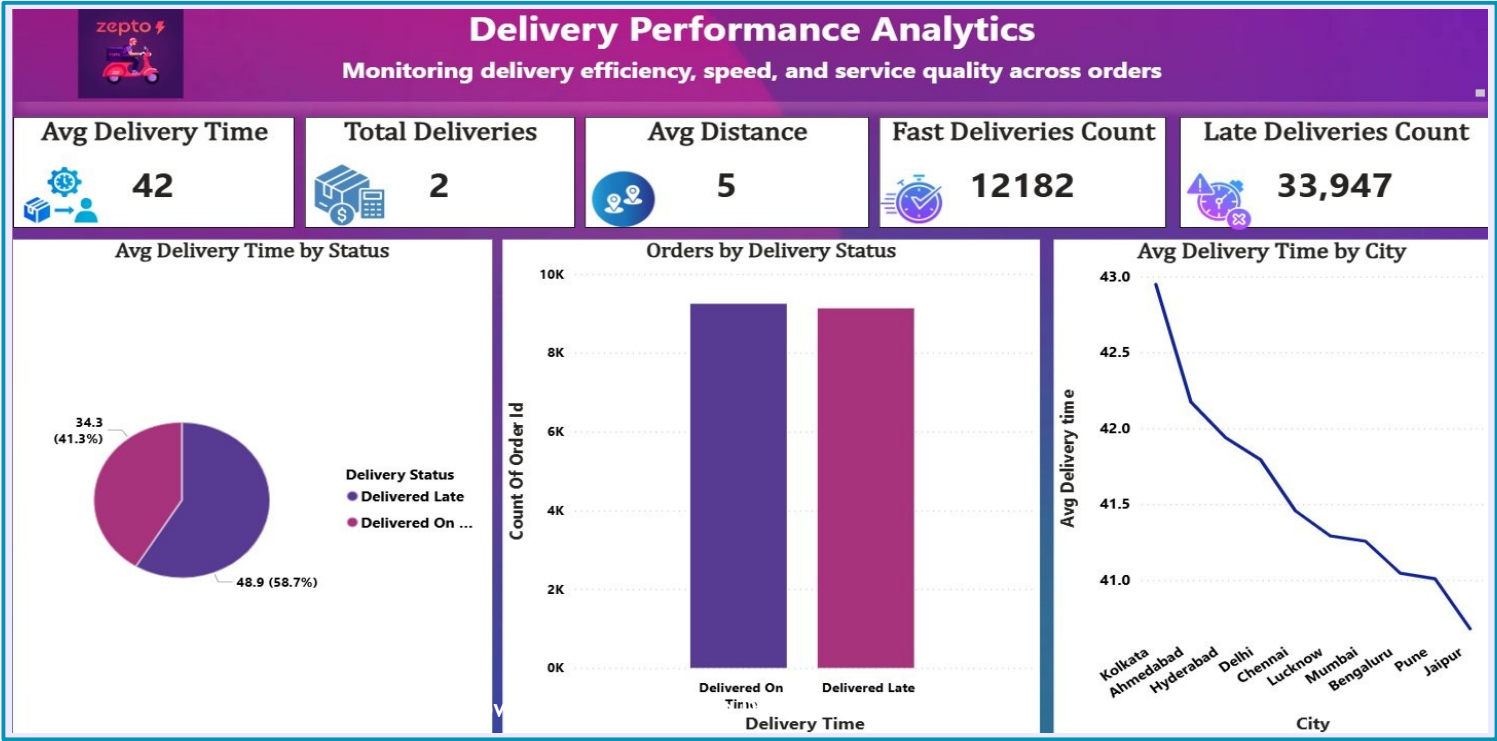

Avg Distance

12,182

Fast Deliveries

33,947

Late Deliveries

Key Highlights

- 58.7% on-time · 41.3% late — significant improvement opportunity
- Kolkata worst city at 43 min avg; Jaipur best at ~40.5 min
- On-time vs late nearly equal in order volume (10K vs 9.2K)
- Filters: City · Delivery Status · Distance Range

Comprehensive Analysis of Orders, Revenue, Behaviour & Delivery

18,372

Total Orders

₹4.95 Cr

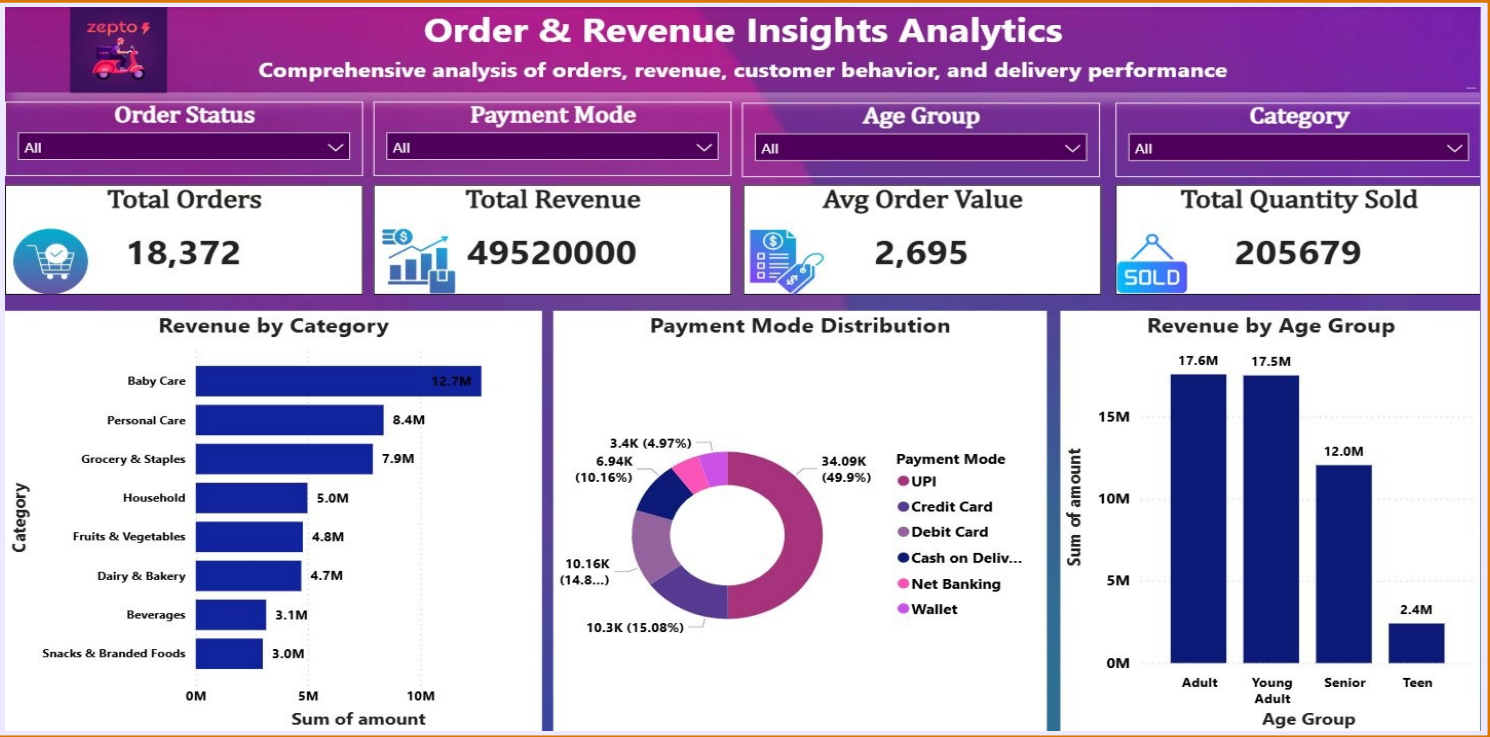

Total Revenue

₹2,695

Avg Order Value

2,05,679

Qty Sold

Key Highlights

- Baby Care leads revenue at ₹12.7M; Personal Care ₹8.4M second
- UPI dominates payments at 49.9% — followed by Credit Card (15%)
- Adults & Young Adults drive highest revenue by age group
- Filters: Order Status · Payment Mode · Age Group · Category

Analysing Product Sales, Revenue Contribution, Demand & Trends

₹4.95 Cr

Total Revenue

2,05,679

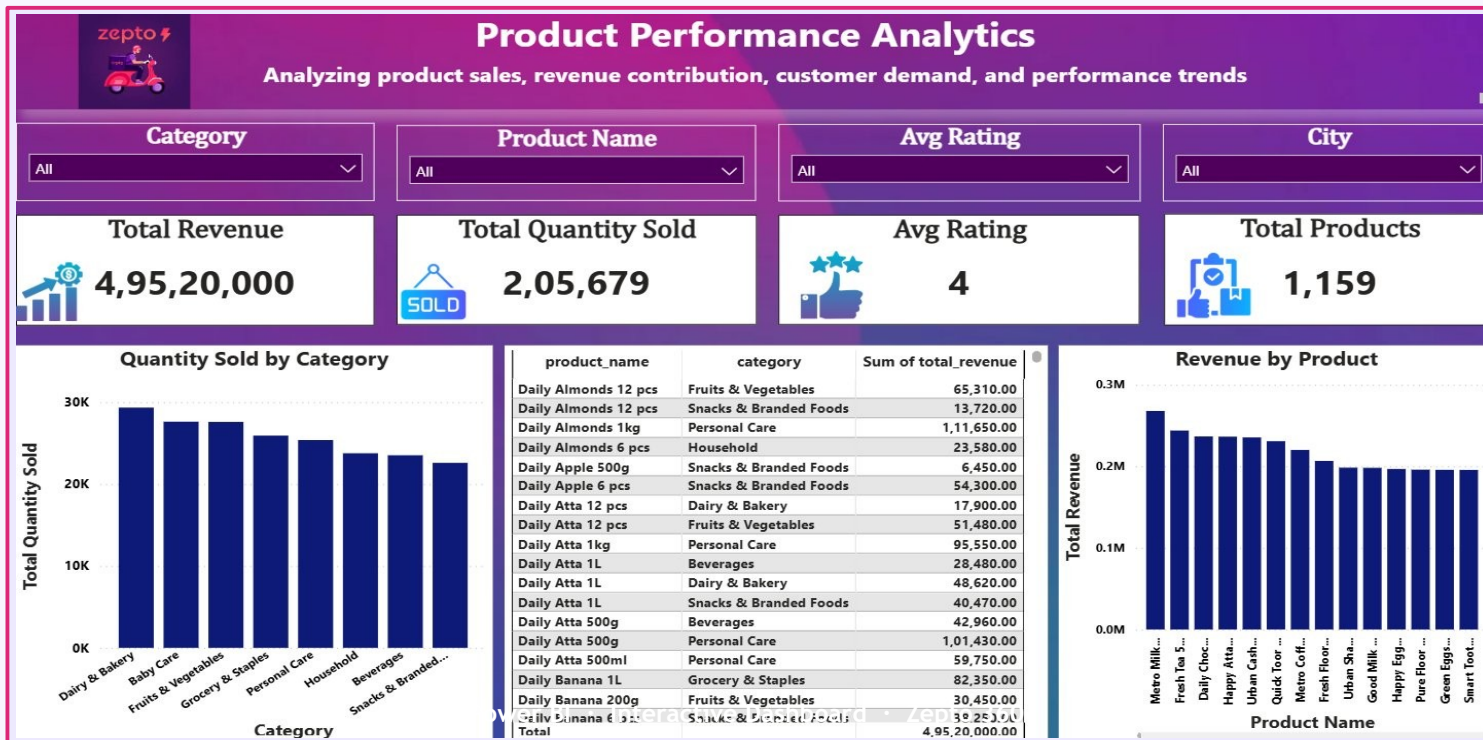

Qty Sold

4 ★

Avg Rating

1,159

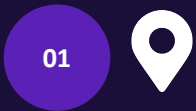

Total Products

Key Highlights

- Dairy & Bakery leads quantity sold; Baby Care & Grocery follow
- Metro Milk top revenue product at ₹0.27M; Fresh Tea #2
- Daily Almonds, Atta & Banana dominate product revenue table
- Filters: Category · Product Name · Avg Rating · City

Data-Driven Discoveries from the Zepto 360° Analytics Suite

Top Performing Cities

Kolkata leads customer count at 1,200. Mumbai & Bengaluru lowest — strong untapped expansion potential.

Best-Selling Products

Daily Almonds, Atta & Banana top revenue. Baby Care category leads at ₹12.7M total — highest of all categories.

Payment Preferences

UPI dominates at 49.9% of all transactions. Credit Card 15%, Cash on Delivery 14.8%, Net Banking 10%.

Delivery Delay Patterns

33,947 late deliveries (73%) vs 12,182 fast. Kolkata worst at 43 min avg; Jaipur best at ~40.5 min.

Customer Purchase Trends

Avg spend ₹4,421 uniform across cities. Hyderabad tops value bubble — highest spend + order volume combined.

Strategic Recommendations

Data-backed actions to accelerate growth and operational excellence

Optimise Delivery Routes

Address 33,947 late deliveries by redesigning zones in Kolkata & Ahmedabad — highest delay cities.

Focus on High-Margin Products

Scale Baby Care (₹12.7M) and Personal Care (₹8.4M) with targeted promotions and premium placement.

Automate Reorder Operations

Trigger auto-reorders for Almonds, Atta & Banana SKUs based on their consistently high sales velocity.

Boost Customer Retention

Target low-spend cities (Mumbai, Bengaluru) with personalised offers to bridge the avg spend gap.

Leverage UPI Dominance

Offer exclusive UPI cashback deals — 49.9% adoption makes it the highest-impact payment channel.

Zepto 360° Business Analytics Dashboard

A production-ready, end-to-end analytics solution built with SQL, Power BI & DAX

Business Value Created

Unified 6 data sources into one suite. Single source of truth for Sales, Delivery, Products & Customers — no more siloed spreadsheets.

Insights Generated

Identified 33,947 late deliveries (73%), UPI dominance at 49.9%, Baby Care as top revenue category at ₹12.7M.

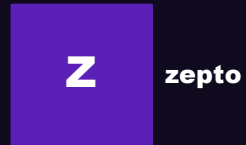

Dashboard Impact

5 interactive Power BI dashboards with dynamic slicers, KPI cards and multi-chart views — instant self-service analytics.

Data-Driven Decision Making

Empowers Zepto leadership to act on delivery delays, city-specific gaps and product performance in real time.
